PITCHLENS

How Pitchlens works

A desktop app that turns a sales call recording into a coaching report, using two small AI models on your computer.

- 100% on-device
- Zero network egress
- macOS (Metal) · Windows (CUDA / Vulkan / CPU)
- Electron · llama.cpp · ffmpeg

THE PIPELINE — FROM RECORDING TO REPORT

1 Upload
Rep drops in a call recording (MP3, WAV, M4A…) or picks a sample.
`drag & drop`

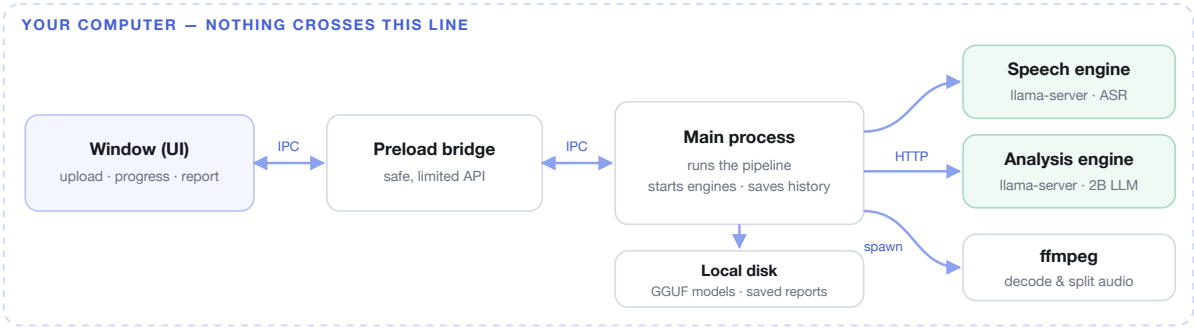

2 Prepare audio
Converted to 16 kHz mono and cut into ~25 s pieces at natural pauses.
`ffmpeg`

3 Transcribe
Each piece becomes text. Lines appear in the app live as they finish.
`Qwen3-ASR 0.6B`

4 Analyze
The language model reads the transcript like a sales coach and fills in the report.
`Qwen3.5 2B`

5 Report
Shown as cards, saved to history, exported as PDF or copied.
`UI · PDF`

ARCHITECTURE — WHAT TALKS TO WHAT

COMPONENTS

FILE	JOB
`renderer/app.js`	Everything you see: upload, progress, report, history
`main/preload.js`	The only door between the UI and the system
`main/main.js`	Window, network lock, files, PDF export
`core/audio.js`	Convert audio, find pauses, split into chunks
`core/transcribe.js`	Send chunks to the speech engine, clean the text
`core/analyze.js`	Coach prompt, report structure, filter bad output
`core/llamaServer.js`	Start, health-check and stop the model servers
`main/reportPdf.js`	Lay out the report and print it to PDF

MODELS (GGUF, 2026)

Speech → text — 1.0 GB
Qwen3-ASR 0.6B · Q8_0 · Jan 2026

Coaching report — 1.3 GB
Qwen3.5 2B · Q4_K_M · Feb 2026

PRIVACY BY DESIGN

- Model servers are offline and listen only on **127.0.0.1**
- The window blocks every non-local request
- Audio, transcripts and reports stay on the device

WHAT THE SALES REP GETS

- **Summary**, call type and buyer sentiment
- **Conversion probability** (70% model + 30% skill rubric)
- **Skill scores**: rapport, discovery, pitch, objections, closing
- **Next steps** with the prospect
- **Mistakes** with evidence and a better way to say it
- **Objections** raised and a suggested response
- **Suggestions** for this call, **recommendations** to practise
- Timestamped **transcript** with click-to-play audio

MEASURED ON A MACBOOK AIR M5 (16 GB)

~1 s
to load each model

28×
faster than real time to transcribe

~50 tok/s
report generation speed

24 s
2-minute call → full report

Measured with OBS and Google Meet also running
